Q2 2026 Fund Commentary

Commentary and opinions are provided by Keyridge Asset Management Limited.

Market commentary

Asia Pacific equity markets benefited from a favourable backdrop in the second quarter of 2026, led by artificial intelligence (AI)-linked technology in South Korea and Taiwan. Performance was driven by the ongoing AI investment cycle, which supported rapid gains in semiconductors, technology hardware and related supply-chain companies.

Semiconductors and AI hardware benefited from structural demand for high-bandwidth memory, advanced logic and bespoke AI accelerators. South Korean and Taiwanese hardware suppliers captured global device and data-centre upgrade spending, delivering strong earnings growth supported by AI-related orders and sustained pricing power. Improved sentiment also extended to selected financials with exposure to capital markets and wealth-related flows.

Chinese equities remained highly dispersed. Consumer industries stayed under pressure from subdued domestic demand and ongoing policy uncertainty, while selected financials offered defensive characteristics and comparatively resilient earnings. Across the ASEAN (Association of Southeast Asian Nations) region, equity performance was mixed and increasingly stock- and country-specific. Singaporean and Indonesian financials offered defensive earnings, with banks exposed to tourism and trade benefiting from ongoing regional mobility. Energy and resources companies in Indonesia and Malaysia were shaped by commodity price volatility that rewarded stronger balance sheets, and export-oriented industrials and logistics in national markets such as Vietnam saw selective order improvement as supply chains normalized.

Performance

Yageo Corp., SK Hynix Inc. and SK Square Co. Ltd. contributed to the Fund's performance because of ongoing strength in the regions and sectors described above.

The information technology, financials and consumer discretionary sectors contributed to performance.

Catcher Technology Co. Ltd. detracted from the Fund's performance because of a cyclical fall in demand in consumer electronics. China Coal Energy Co. Ltd. also detracted from performance because of commodity price volatility.

An allocation to the real estate sector detracted from performance.

Portfolio activity

The sub-advisor added WuXi AppTec Co. Ltd. because of its leading position in the global pharmaceutical industry and resilient long-term earnings growth potential in China. The sub-advisor also added UBTech Robotics Corp. Ltd. because of its exposure to the commercialization of AI-enabled humanoid robotics.

The sub-advisor increased KB Financial Group Inc. to capture the wealth effects in South Korea following strong performance in that country's stock market.

The sub-advisor sold Trip.com Group Ltd. because of slow revenue growth driven by margin pressure. Given ongoing weakness in the property markets in Hong Kong and mainland China, the sub-advisor also sold Sun Hung Kai Properties Ltd.

Outlook

In the sub-advisor's view, the Asia Pacific market could continue to be driven by the structural technology growth story, though with increased dispersion at the market and sector level. The ongoing AI investment cycle may continue to support earnings visibility for leading semiconductor, technology hardware and related supply-chain companies in Taiwan and South Korea, while incremental capacity additions and rising competition might gradually temper margin expansion. Financials exposed to capital markets activity, wealth management and secular credit growth could benefit from stable to mildly easing interest-rate conditions and benign asset-quality trends, although regulatory developments and capital requirements are likely to remain key differentiators.

In the sub-advisor's view, China may stay a source of volatility and dispersion, with weaker segments of property-related exposures constrained by subdued confidence and policy uncertainty, while selected financials and high-quality state-linked companies could offer more defensive earnings profiles. Across the ASEAN, performance should be increasingly stock-specific, with banks exposed to tourism and trade, infrastructure-related beneficiaries and export-oriented industrials in markets positioned to capture ongoing regional integration and supply-chain diversification.

Overall, in the sub-advisor's view, Asia Pacific equity markets are likely to be shaped by the interplay between AI-driven technology growth, domestic demand resilience and policy signalling from major countries, set against lingering macroeconomic, regulatory and geopolitical risks. Valuation dispersion across and within markets should remain pronounced, with premium multiples concentrated in structural growth and quality franchises. In this environment, disciplined stock selection, emphasis on balance-sheet strength and governance standards, and careful management of country and sector exposures are likely to be critical in capturing upside while mitigating drawdown risk.
